

Case Study

Too Good To Waste

Akshatha Suchethan

Project overview

The product:

A complete food waste reduction system that helps people store, track and use the food they buy in an effort to reduce waste.

Project duration:

January 2023 - April 2023

Project overview

The problem:

People want to reduce their household food waste, especially when it comes to hyper-perishables. These foods don't come with storage instructions and typically go bad before expected.

The goal:

Create a smart and simple solution that teaches best practices for storing perishable food items and be mindful about taking steps toward reducing food waste in households.

Project overview

My role:

UX designer leading app and responsive website from concept to delivery

Responsibilities:

User Interviews, personas, user research, wireframing, prototyping, etc.

Understanding the user

- User research
- Personas
- Problem statements
- Competitive audit
- Ideation

User research: summary

I conducted user-moderated one to one zoom interviews with 9 participants and found. Most-often wasted food items are hyper-perishables like leafy greens, strawberries and mushrooms.

A variety of factors contribute to food waste including: forgetting purchased items and plans changing unexpectedly.

When asked what they'd like to see in a digital solution to combat food waste, users suggested: education on food storage, reminders to use food they've purchased and ways to track their personal impact over time.

Persona 1: Ira

Problem statement:

Ira is working mom and finds it hard to remember things stored in the fridge.

IRA

Age: 36

Education: JD

Hometown: Brussels

Family: Married with two kids

Occupation: lawyer

“Working mom has forgets to keep track of food in the fridge”

Goals

- Cook healthy meals
- Save money
- Save time

Frustrations

- Doesn't utilize thing in fridge
- Ends up wasting food let unattended in fridge
- Worried about wasting money

Is a working mom with 2 kids wants to spend more time with kids and cook healthy meals. Worried about environmental waste and make best use of things in the fridge

Persona 2: Aditi

Problem statement:

Aditi is striving yoga teacher with packed a schedule and has no time to keep track of food in the fridge.

Aditi

Age: 31

Hometown: Bangalore

Family: Single

Occupation: Yoga teacher

"I have no time to cook, when I do I can't find anything left in my fridge"

Goals

- Cook healthy meals
- Save money for goals down the road
- Reduce food waste.

Frustrations

- Fresh produce are pricey and go to waste soon
- Worried waste is more than the food she consumes

Is a striving yoga teacher who lives alone and wants cook healthy meals without wasting lot of money on outside food.

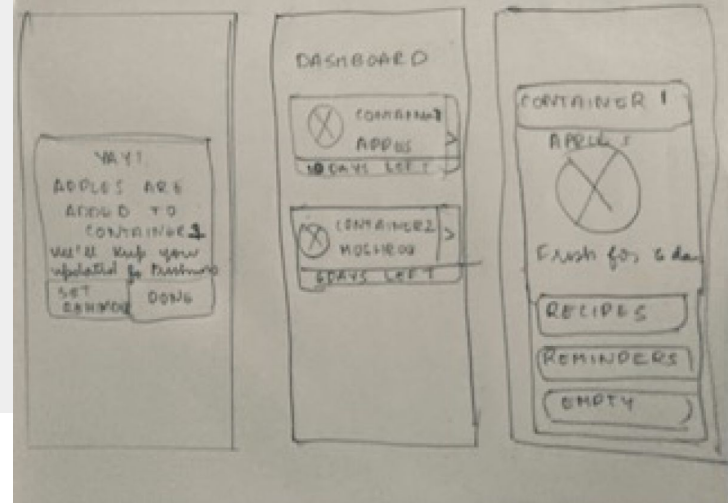

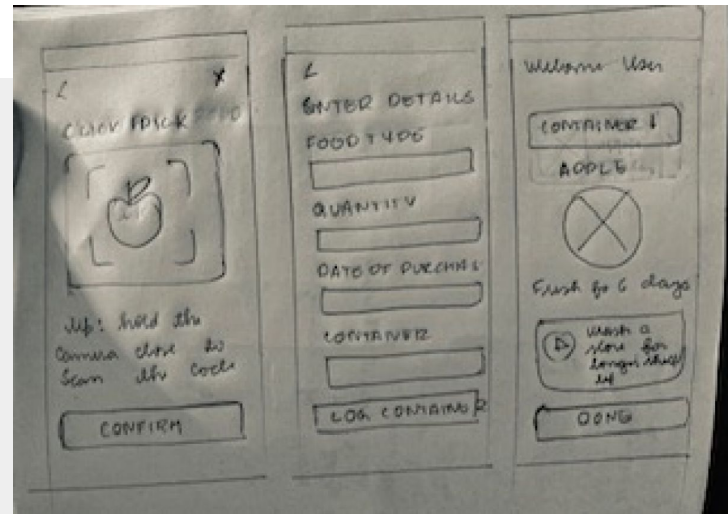

Competitive audit

An audit of a few competitor's products provided direction on gaps and opportunities to address with the Too Good to Waste app

A-Team Food Waste Competitive Analysis	Feature Analysis	Competitive Advantage	Strengths	Weakness	General Notes	Screen Shots
DIRECT COMPETITORS						
List Ease	<p>Primary Features: Grocery list Priority Inventory Recipe Organizer Spending Tracker</p> <p>Secondary Features: Flexibility to update accounts Spending Tracker based on the receipts you have scanned. AI/coder scanner used when creating grocery lists. Allows a database to allow population of items when creating a grocery list. Share your lists, email them, and allow multiple people to add to them and check stuff off.</p>	<p>Formulation: This app optimizes the receipt organizer by entering your PIN a coffee to win up to \$100 based on how many receipts you have scanned, the coffee to meet each week so more chances to win all the time.</p>	<p>The app has a VERY simple interface with a look that feels outdated. Offers a lot of functionality. The spending tracker is nice but feels that its an unnecessary feature as there are so many more apps that simply do it better.</p>	<p>The success of the app is very much driven by the user taking the time to scan/keep a log of data. The Priority Inventory feature is a great idea however the application allows the user to constantly be checking in on items and updating their usage (retaining quantity I believe that I am not going to regularly be updating the remaining quantity to my keep-up or ask on a regular basis. Too not enough automation and too user reliant.</p>	<p>The app presents a nice solution to track your grocery inventory and to create collaborative lists. However the UI is lacking, very time consuming to consistently have accurate data. The most successful part of the app is the list maker. The video integrations could use some work.</p>	Screen Shots
Any List	<p>Primary Features: Full recipe Recipe search function + storage Meal Planner</p> <p>Secondary Features: Meal Planner Share multiple lists Share, email or print lists Check and check off items Add shared items Add from your favorites Search a data base to populate lists</p> <p>RECIPE SEARCH: Save and organize to different user defined collections Search through and filter by several options Search Online for new recipes</p> <p>MEAL PLANNER: Choose from your saved recipes add to any day of the month Add items needed to your lists</p>	<p>Mobile and simple to use. Would use this becoming an asset to a list maker wanting to centralize their grocery and recipe needs. Users have an easy comparable version. Allows for integration with share and on Will interface the meal plan with external apps like Outlook, Google cal, and Outlook calendar. Recipe ingredients can directly be added to a shopping list</p>	<p>The interface is really easy to use once you create an account all of your lists, recipes and meal planning can be saved and accessed any time. The Recipe function is very strong to use and allows the user to integrate as they need but leaving their own 'collections'. As well as allowing the user to use flexible filters or search by key words to find specific items or recipes. All ingredients in a recipe can be added directly to a grocery list. The meal planning feature is a premium feature. Building in a way to maximize the expanded functionality of the app.</p>	<p>Users are not able to read or try to function with out upgrading to the paid version. There is no data base of recipes, all recipes have to be imported from other external sources.</p>	<p>The app is big, this fits all the screen but its a solid tool for daily use. It would also nice to try all features before paying for them, there was an option for a trial period</p>	Screen Shots
SaveTheFood.com	<p>Primary Features: A recipe for information of meal planning Has a data base of recipes to search through Provides an educational resource to learn how to generate your food waste & how to be regenerated, when it is finished, optimal storage, if and how it can be frozen, how long it lasts, community providing ingredients, and articles for the users.</p> <p>Secondary Features: Recipe integration Guest planner: provides the user with a tool to help determine how much food will be needed to serve a certain number of guests. Meal prep guide Recipejar</p>	<p>This is a huge resource for those who plan an event, guidance on what to purchase to purchase. The meal planner is a huge asset. Preparing for multiple guests is difficult and the planner breaks it down then lead your hand through it. Makes a daunting task easy. The recipes are great as well and especially for breaking it down into featured, cooking with scraps, and on-the-bank items.</p>	<p>The social media allows the user to choose from 3 different types of recipe: small snacks, evening appetizers, and big events to better serve the user's needs. You can decide if you want leftovers and how many portions, choose by type of meal: slow dinner party (great soups), recipe generator, or a recipe. Then you choose everything, meat, drinks, sides, dessert, etc. and it populates a shopping list based on the search ingredients. The recipe data base is organized so it allows the user to search through featured recipes, recipes for food scraps, and how or what to do with foods that are on the brink of unusable. The site provides strong resources to help users not waste the food they purchase and to not over purchase.</p>	<p>Users have a mobile version</p>	<p>see this as a huge resource for a very food waste conscious individual or someone who is just starting to learn how to better utilize the food they buy.</p>	Screen Shots
INDIRECT COMPETITORS						
MY FITNESS PAL	<p>Primary Features: Food Diary Progress Tracker Calorie Counter</p> <p>Secondary Features: Work out Routines Meal Plans Reminders</p>					Screen Shots
NOOM	<p>Primary Features:</p> <p>Secondary Features:</p>				<p>Forced collaborating, makes it hard to just discover what through it all about and if I want to use it or not.</p>	

Ideation

I did a quick ideation exercise to come up with ideas for how to address gaps identified in the competitive audit. My focus was specifically on **waste tracking and simple recipe features**.

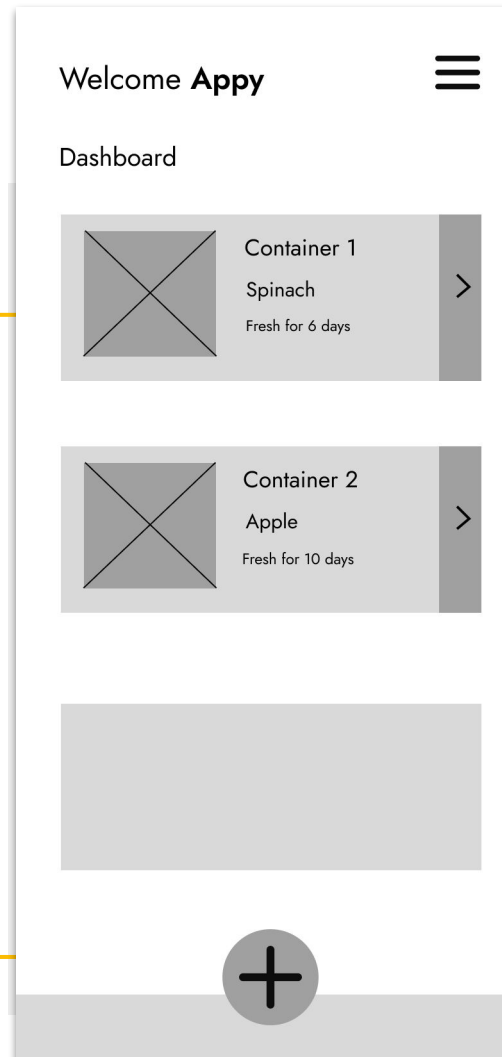

Digital wireframes

After ideating and drafting some paper wireframes, I created the initial designs for the **Too Good To Waste** app. These designs focused on making it easy for users to view add new food containers.

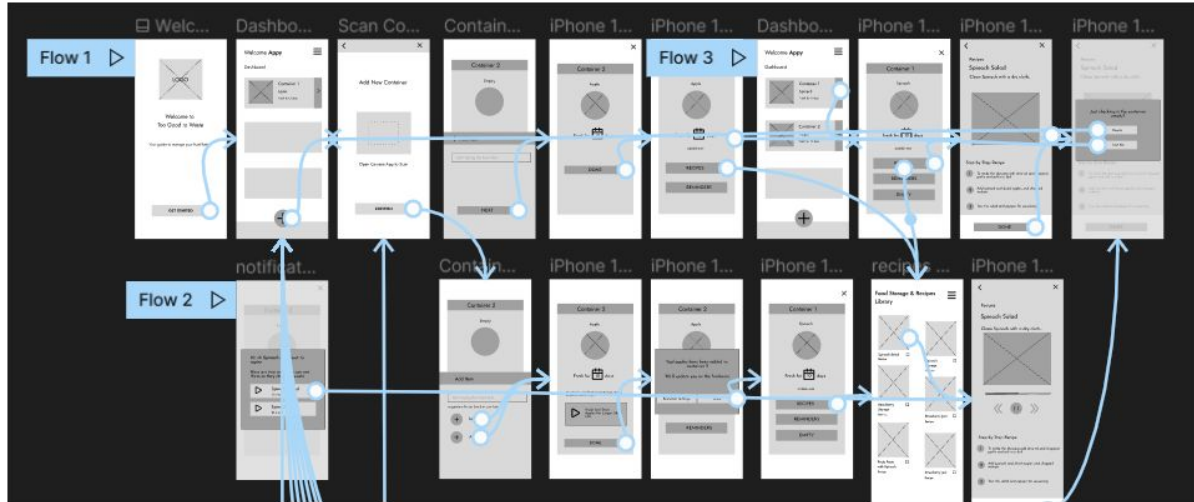

Food stored in container

Defined button to add new containers of food

Low-fidelity prototype

To prepare for usability testing, I created a low-fidelity prototype that connected the user flow of viewing an item about to expire and using it in a recipe.

View [Too Good to waste Lo-fi Prototype](#)

Usability study: parameters

Study type:

Unmoderated usability study

Location:

India, remote

Participants:

5 participants

Length:

15-30 minutes

Usability study: findings

These were the main findings uncovered by the usability study:

1

Expiration Dates

People preferred clear indications of when food items would expire..

2

Recipes

People want easy access to recipes that specifically use the food they already own.

3

Tips on how to store

Video and images to show how to properly prep and store food post-grocery run

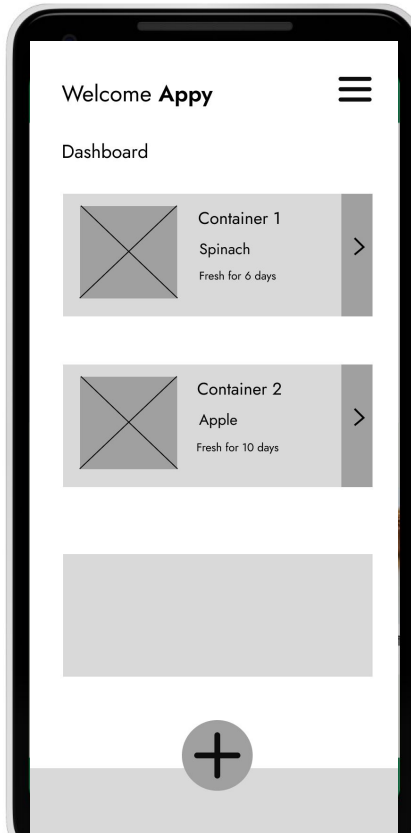

Refining the design

- Mockups
- High-fidelity prototype
- Accessibility

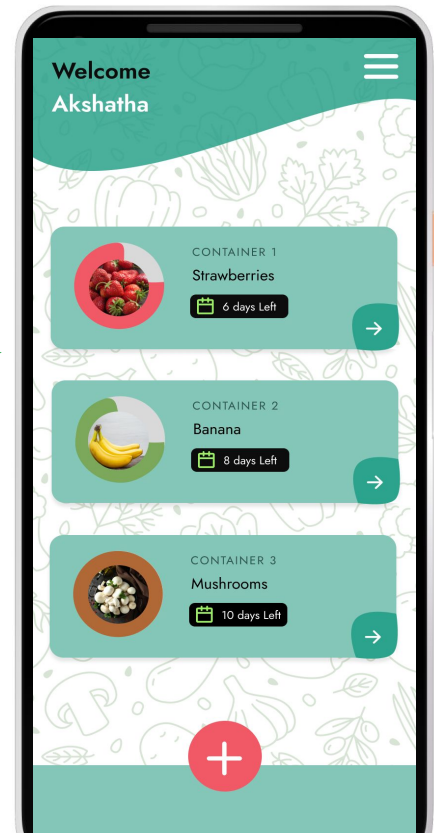

Mockups

Based on the insights from usability testing add clear indication to display expiration dates making it stand out

Before usability study

After usability study

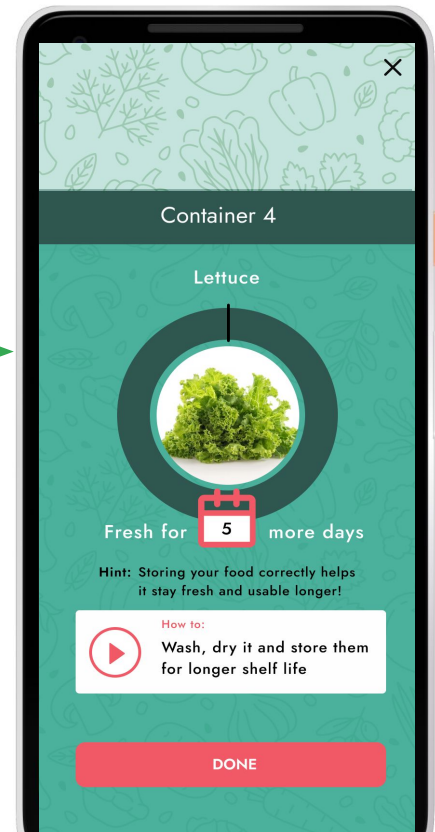

Mockups

Added tips on how to store food items for longer shelf life

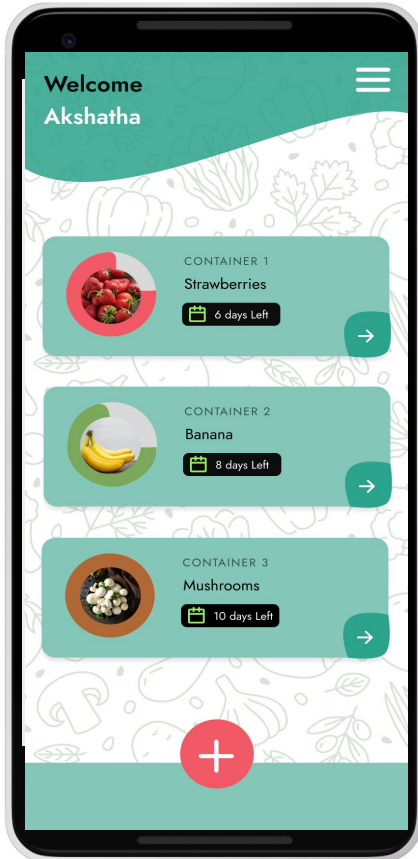

Before usability study

After usability study

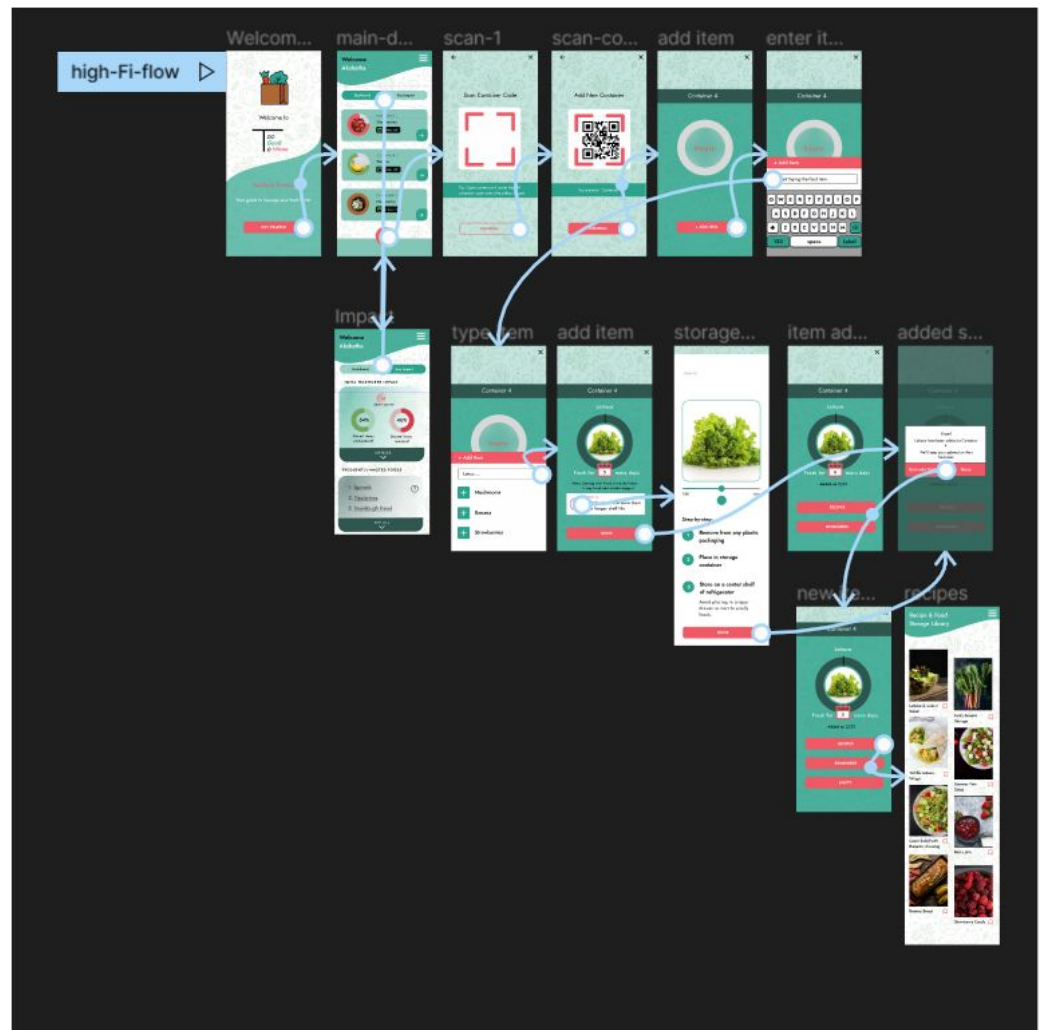

Mockups

High-fidelity prototype

The high-fidelity prototype followed the same user flow as the low-fidelity prototype, including design changes made after the usability study.

[TooGoodToWaste](#)
[high-fidelity prototype](#)

Accessibility considerations

1

Use of contrasting colors
For readability

2

Clear labels for interactive
elements that can be read
by screen readers.

3

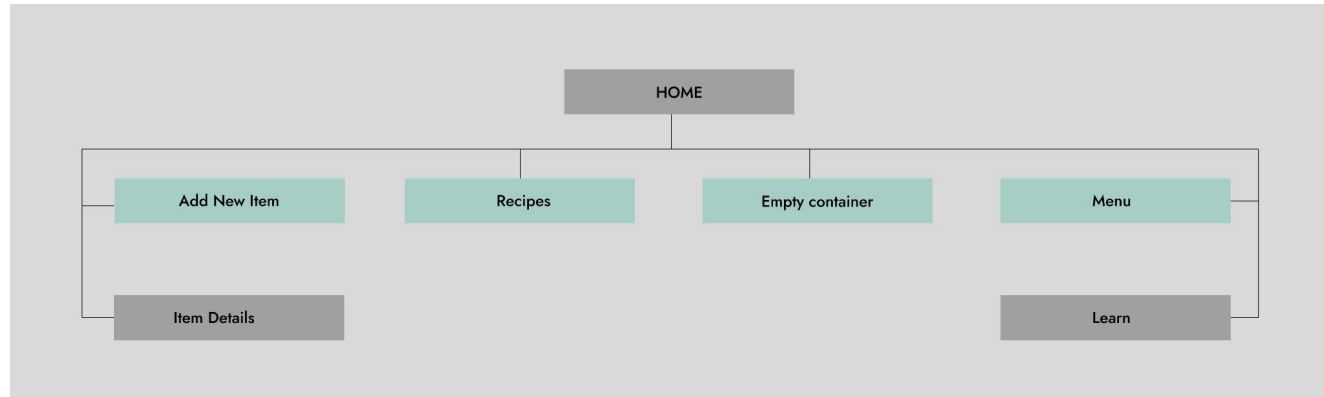

Initial focus of the home
screen on personalized
recommendations help
define the primary task or
action for the user.

Responsive Design

- Information architecture
- Responsive design

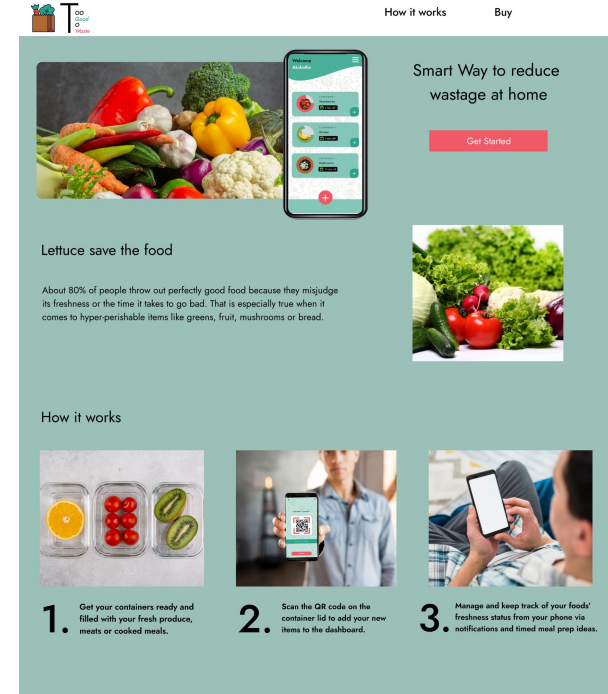

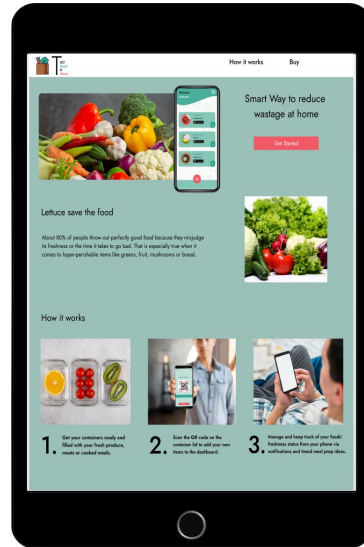

Sitemap

With the app designs completed, I started work on designing the responsive website. I used the Too Good To Waste sitemap to guide the organizational structure of each screen's design to ensure a cohesive and consistent experience across devices.

Responsive designs

The designs for screen size variation included mobile, tablet, and desktop. I optimized the designs to fit specific user needs of each device and screen size.

Going forward

- Takeaways
- Next steps

Takeaways

Impact:

Eliminated the need for user to open the container and perform visual smell test to check the freshness, provided a easy way to track food kept in fridge

What I learned:

Even though the problem I was trying to solve was a big one with every iteration we would get closer towards the end of goal making users work easier one step at a time.

Next steps

1

Prioritize and revisit user-suggested iterations:

- Data-driven impact stats
- Customizing reminders
- Streamlining container setup

2

Consider gamification and rewarding users for sustained food waste reduction

3

Insert a few sentences summarizing the next steps you would take with this project and why.

Let's connect!

Thank you for your time reviewing my work on the **Too Good To Waste** App! If you'd like to see more or would like to get in touch, my contact information is provided below.
